COMP 2005 WINTER 2025

Group 6 Project- THE KIVI GAME

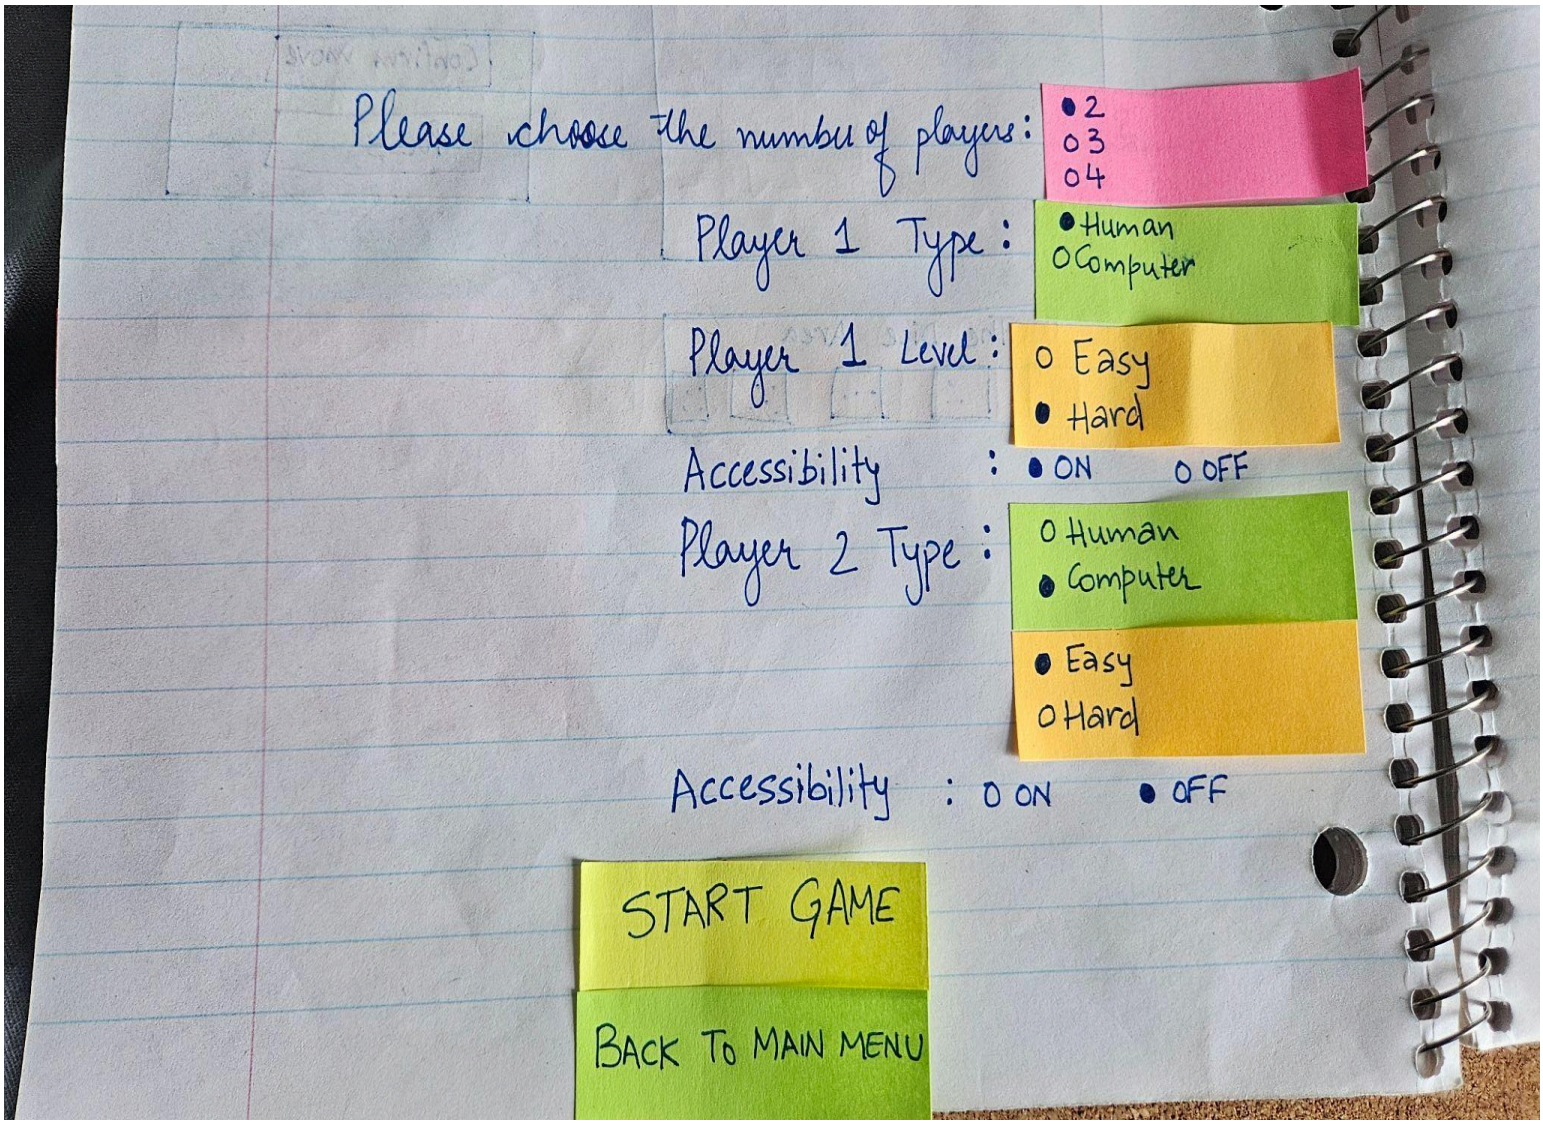
UI PROTOTYPE SKETCHES

USE CASE 1: THE SETUP

The following snapshots(Pictures 1-3) encapsulate the basic idea of how the game would be set up.
Once the user is in the game, the user is met by a main menu which lets the user choose between the options.

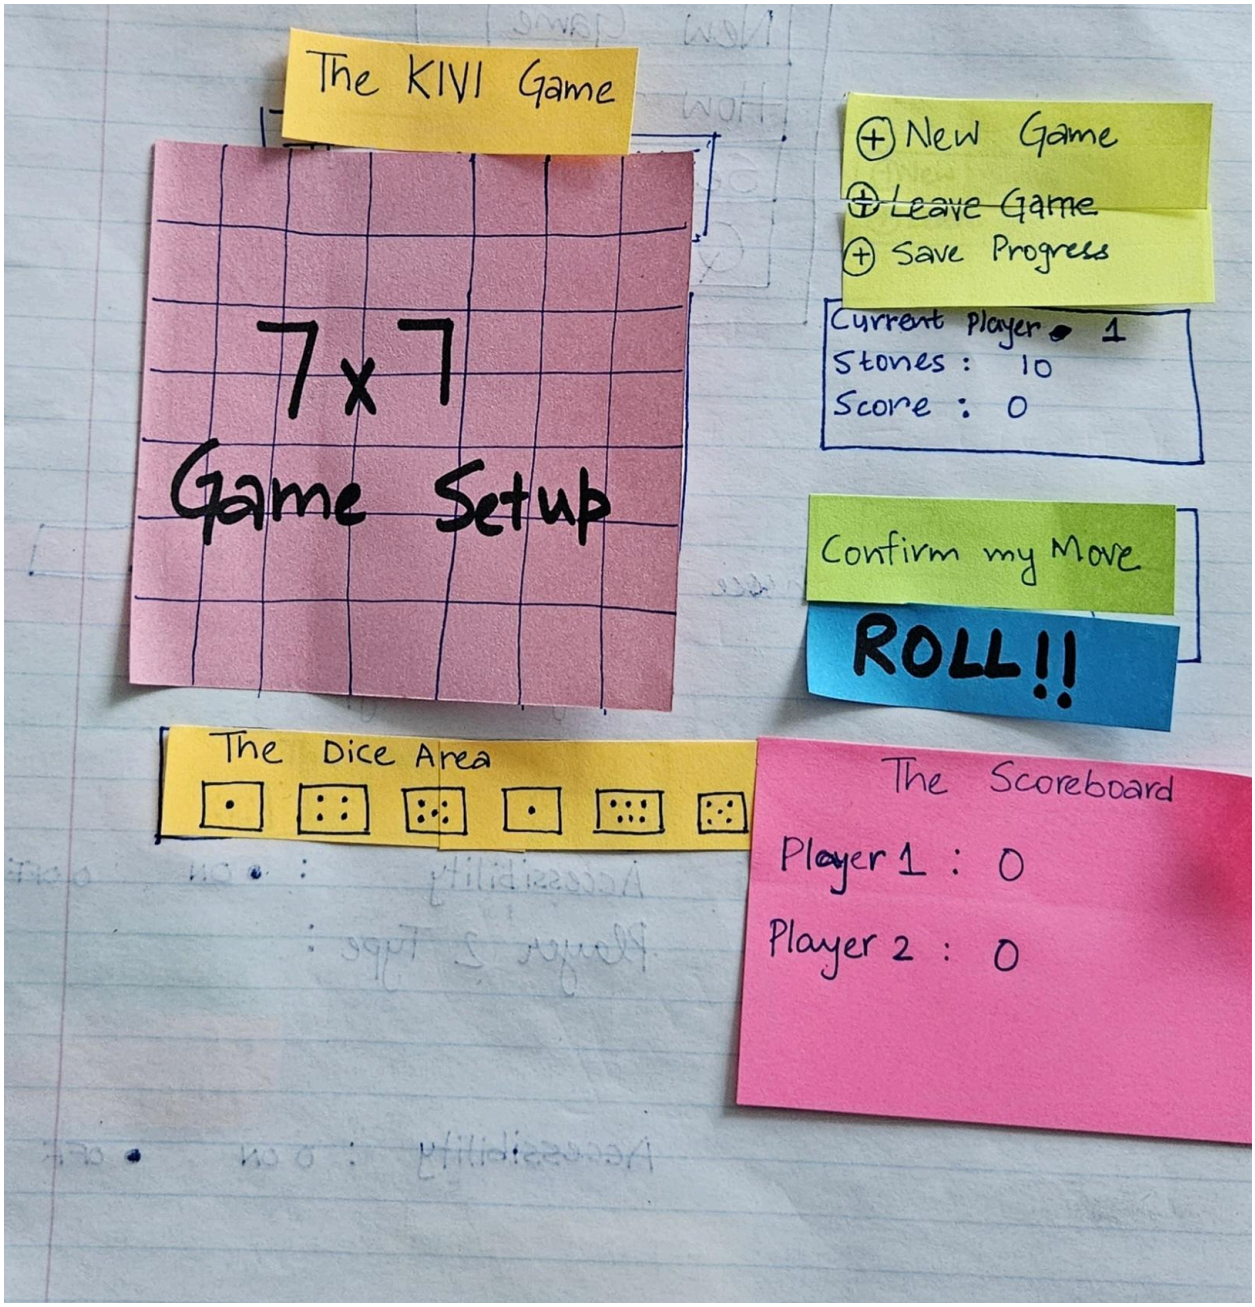
Picture 1

Once the user clicks on New Game, the user is prompted to select the number of players, difficulty level, and the player types with the help of radio buttons.
Once the user is done with selections, the user either clicks start game or decides to go back to the main menu. This is illustrated in the picture below (Picture 2).



Picture 2

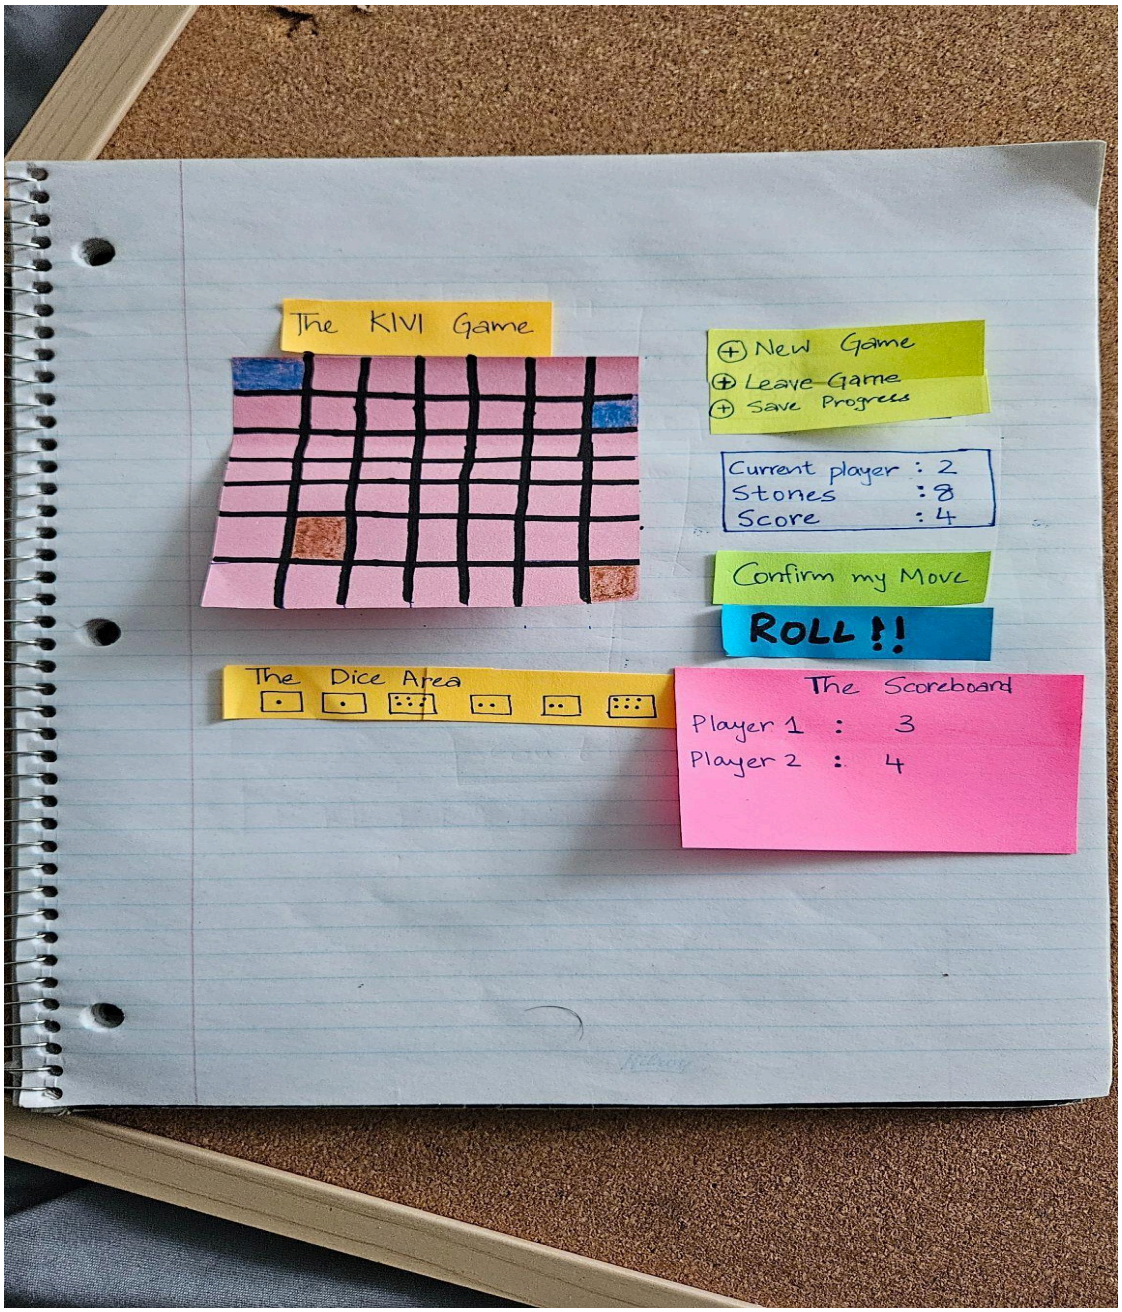
Once the user clicks on the “START BUTTON”, the game window appears with the setup like the following.



Picture 3

USE CASE 2: TAKING A TURN

Once the game is successfully set up, the first player plays by rolling the dice and processing to place their stone with the most suited combination, and the game continues.
Illustrated below is an instance of the game where there are 2 players playing. The player 2 is on their second chance. Player 1 has stones placed in the blue-colored squares and brown-colored squares are of the player. (Picture 4)



Picture 4

Picture 5 shows the board setup just before player 2 rolls the dice.
